

COMACT'S NEW-GENERATION MILLER PLANER

Designed for today's planer mill operations

 **COMACT**™

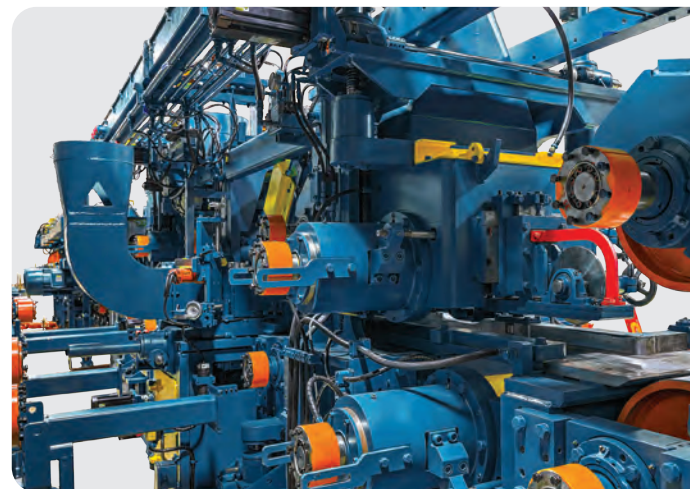

Building on decades of proven performance, the new-generation Miller Planer represents a significant evolution of the original Miller design. Engineered for high-speed production environments, it transforms rough lumber into precisely sized, high-quality, market-ready products while delivering operational reliability and maintenance efficiency.

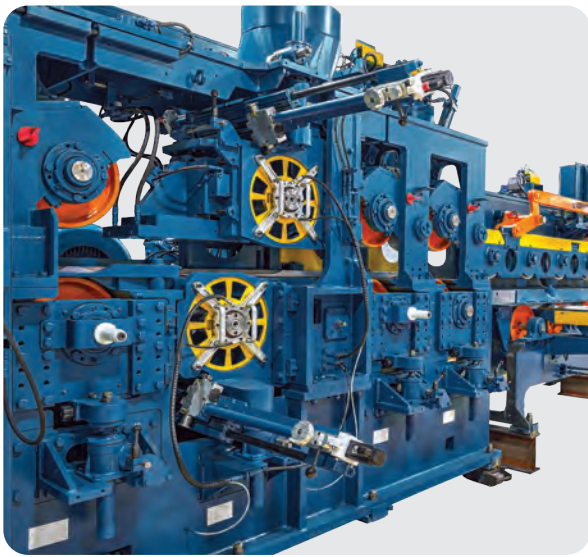

Built around what matters most

Superior finish quality: A larger cut circle increases knife capacity, enhancing the well-known Miller surface finish and delivering improved dimensional consistency across all lumber product sizes and species.

Higher operational reliability: Individually driven feed rolls and simplified mechanical systems reduce single-point failures and help maintain continuous production under demanding conditions.

Simplified maintenance: Improved accessibility, external adjustments, and a service-focused design reduce daily upkeep time and streamline alignment procedures.

Proven performance, refined for today's mills

- Rigid, precision-built structure for stable operation
- Independent feed roll drives replacing shared belt-driven systems
- Integrated Force Position (IFP) system for precise roll control
- Flexible feeding configuration supporting push (ribbon) or pull (gap) feeding modes, configurable from the HMI
- Optional high-speed splitter for added product flexibility
- Segmented cooling zones with operator feedback

Upgrade available

New-generation enhancements are available as retrofit solutions for existing Miller Planers. This allows mills to modernize critical systems, improve reliability, and extend equipment life without full machine replacement.

Technical specifications

- Maximum speed: 3,000 fpm
- Board sizes: 1 x 3 in. to 6 x 12 in.
- Lengths: All
- Feeding configuration: push or pull; ribbon or gap feeding (HMI selectable)
- Available configurations: 6-roll, 8-roll, 10-roll
- Optional splitter: speed up to 1,200 fpm

The new-generation Miller Planer reflects Comact's commitment to continuous improvement and practical innovation. It preserves the trusted performance of the Miller design while delivering meaningful advancements where they matter most.
